

MS-101 Specifications

Network Interface - SAFE System

Front View

Back View

The MS-101 is the network interface unit used within **THE SAFE SYSTEM**. The MS-101 network interface allows the Audio Enhancement Ultimate IISE to be interconnected to the school's network infrastructure. This device can take the alert signal sent from the teacher's infrared microphone and send a corresponding alert, a string of text identifying the room the alert was sent from, and provide live audio via a browser-based graphical user interface (GUI).

1. Provides alert messaging that supports the following Protocols:
 - a. FTP
 - b. SMTP
 - c. HTTP
2. Supports a direct browser connection from Internet Explorer
 - a. GUI provides user name and password authentication with appropriate levels of administration and user access permission settings
 - b. GUI supports the live streaming audio coming from the classroom
3. Supports static IP address
4. Separate 9-Volt power supply included
